CHRONOBIOLOGY INTERNATIONAL
Vol. 20, No. 6, pp. 1233–1240, 2003

Subject Index to Volume 20

A

Accidents, circadian rhythm in children (letter to the editor), 157–159
Actimetry, for assessment of changes to the rest–activity cycle, 1039–1059
Adaptation, significance of circadian clocks to, 901–919
Aging
  change of relative zeitgeber strength of lights-on and lights-off in, 405–416
  temporal changes in intestinal-epithelium proliferation related to, 37–47
Alcohol-dependent persons, temporal pattern in consumption of the first drink of the day in, 1093–1101
Annual weeds, circadian response to application rates of herbicides with different modes of action, 299–324
Antioxidative defense mechanisms, and circadian rhythms, 921–962
Arthritis, daily hormone profiles in male Long Evans rats in acute phase of, 823–836

B

Biliary excretion, dosing-time-dependent variation of flomoxef in rats, 463–471
Birds, hypothalmic circadian organization in
  anatomy, functional morphology, and terminology of the suprachiasmatic region, 637–655
  clock gene expression, 657–669
Blind people, melatonin for resetting the circadian phase positions of, 837–852
Blood pressure
  comparison in patients before and after elective coronary artery bypass surgery, 337–349
  relation of circadian rhythm to gestational hypertension, 135–156
Body temperature, development of purification methods for assessment of circadian rhythms in Mongolian gerbils, 249–270
Bone markers, circadian rhythms in serum and their relation to the effect of etidronate in rats, 325–336

C

Cage enrichment, effect on the daily use of running wheels by Syrian hamsters, 9–20
Chagas disease, effects on the circadian system, 49–64
Chick pineal organ, circadian signaling in, 617–636

DOI: 10.1081/CBI-120027840
0742-0528 (Print); 1525-6073 (Online)

www.dekker.com

Children, circadian rhythm of accidents in (letter to the editor), 157–159
Chronopathology, of disease incidence in rice (*Oryza sativa* L.), 81–96
Chronopharmacodynamics, evaluation for indomethacin by the kaolin-induced pain model in mice, 473–484
Chronopharmacology, of ranitidine, effects of gender and phase of the menstrual cycle on the kinetics of, 485–494
Circadian activity rhythms, light entrainment in tench (*Tinca tinca*), 1001–1017
Circadian clocks
  adaptive significance of, 901–919
  combined theoretical and experimental approaches for understanding of, 559–575
  daily variation of clock output gene activation in behaviorally arrhythmic *mPer/mCry* triple mutant mice, 683–695
  during entrainment, stabilization by period responses to zeitgeber signals, 389–404
  lifetimes of mRNAs for proteins regulated by in a dinoflagellate, 963–976
  precision of, 209–221
Circadian E-box, 371–388
Circadian entrainment patterns, dependency of plasticity on light intensity, 233–248
Circadian organization, transgenic TGR(mREN2)27 rats as a model for disturbance at the level of the brain, the heart, and the kidneys, 711–738
Circadian pacemaker
  effect of light during lactation on phasic and tonic responses of, 21–35
  electrophysiology in mammals, 171–188
Circadian programs, entrainment of, 741–774
Circadian rhythms
  of accidents in children (letter to the editor), 157–159
  of annual weeds in response to application rates of herbicides with different modes of action, 299–324
  of blood pressure, and the diagnosis of gestational hypertension, 135–156
  of blood pressure and heart rate, comparison in patients before and after elective coronary artery bypass surgery, 337–349
  of body temperature in Mongolian gerbils, development of purification methods for assessment of, 249–270
  in consumption of the first drink of the day in alcohol-dependent persons, 1093–1101
  in cortisol reactivity to an acute stressor, 863–878
  differences in eating habits for night and day workers, 1075–1092
  of disease incidence in rice (*Oryza sativa* L.), 81–96
  of dosing time, relation to biliary excretion of flomoxef in rats, 463–471
  of eclosion, 775–794
  of GABA and taurine concentrations in various hypothalamic areas, effect of chronic hyperprolactinemia on, 271–284
  of hormone profiles in male Long Evans rats in acute phase of adjuvant arthritis, 823–836
  of human period 1 (*hPER1*) reporter gene activity in human neuroblastoma cells, 671–681
  melatonin for resetting in blind people, 837–852
  of motor activity of blinded rats, effect of lighting conditions during lactation on, 441–450
  of oxidative phosphorylation, 451–461
  and oxidative stress and antioxidative defense mechanisms, 921–962

of performance under constant routine conditions, 109–121
of photic responsiveness in the mouse, effects of prolonged exposure to darkness on, 417–440
of postprandial metabolism, 795–808
relationship between lifestyle regularity and subjective sleep quality, 97–107
in serum bone markers and their relation to the effect of etidronate in rats, 325–336
sleep–wake, for night shiftwork healthcare workers, 351–360
and the suprachiasmatic nucleus, 1–8
in the toxic effects of the serotonin antagonist ondansetron in mice, 1103–1116
Circadian RNA-binding proteins, function and *cis*-acting elements in microalgae, 529–541
Circadian signaling, in the chick pineal organ, 617–636
Circadian systems
of the cockroach *Leucophaea maderae*, neural organization of, 577–591
controlling sperm release in moth *Spodoptera littoralis*, effects of light and temperature on, 809–821
functional and adaptive mechanisms of, introduction to special issue on, 525–528
and melatonin, 697–710
Trypanosoma cruzi-infected mice, 49–64
Circadian-controlled tomato LHCa4*1 (CAB 11) protein, surface plasmon resonance spectroscopy studies of interaction with its promoter, 543–558
Clock gene
differences in a patient with recurrent hypersomnia, 893–900
expression in birds, 657–669
Cockroach *Leucophaea maderae*, neural organization of the circadian system of, 577–591
Cognitive performance, on a self-constructed test battery, 109–121
Coronary artery bypass surgery, elective, comparison of blood pressure and heart rate in patients before and after, 337–349
Cortisol
circadian variation in reactivity to an acute stressor, 863–878
seasonal but not daily rhythmicity in serum levels in goats, 65–79
Cycling kinematics, diurnal variations in, 879–892

D

Daily rhythmicity, lack in serum cortisol in goats, 65–79
Dark adaptation, of circadian photic responsiveness in the mouse, 417–440
Development, effect of light on pacemaker during, 21–35
Diazepam and its metabolites, effects on nocturnal melatonin secretion in the rat pineal and Harderian glands, 285–297
Dietary carbohydrate malabsorption, effect of light intensity on, 123–133
Digestion, of carbohydrate in the supper meal, effect of light intensity on, 853–862
Dinoflagellate, lifetimes for mRNAs for clock-regulated proteins in, 963–976
Diurnal variations, in cycling kinematics, 879–892

E

Eating habits, differences between night and day workers, 1075–1092
E-box, circadian, 371–388

Eclosion
circadian control of, 775–794
rhythm, entrainment in *Drosophila melanogaster* populations reared for more than 700 generations in constant light, 977–987
Electrophysiology, of the circadian pacemaker in mammals, 171–188
Entrainment
of circadian programs, 741–774
of eclosion rhythm in *Drosophila melanogaster* populations reared for more than 700 generations in constant light, 977–987
to light, of circadian activity rhythms in tench (*Tinca tinca*), 1001–1017
stabilization of circadian clocks during by period responses to zeitgeber signals, 389–404
Etidronate, relation of circadian rhythms in serum bone markers to effect in rats, 325–336

F

Flomoxef, dosing-time-dependent variation in biliary excretion in rats, 463–471

G

GABA. *See* Gamma aminobutyric acid
Gamma aminobutyric acid (GABA), effect of chronic hyperprolactinemia on circadian rhythm in concentration changes in various hypothalamic areas, 271–284
Gastrointestinal activity, effect of light intensity on, 123–133
Gender
effects on the kinetics of ranitidine, 485–494
temporal changes in intestinal-epithelium proliferation related to, 37–47
Gerbils, development of purification methods for assessment of body temperature circadian rhythms in, 249–270
Gestational hypertension, relation of circadian rhythm of blood pressure to, 135–156

H

Hamsters
dependency of plasticity of circadian entrainment patterns on light intensity, 233–248
effect of cage enrichment on use of running wheels by, 9–20
precision of circadian clocks in, 209–221
Harderian gland, effects of diazepam and its metabolites on nocturnal melatonin secretion in, 285–297
Healthcare workers, risk of 12-hour night shifts to, 351–360
Heart rate, comparison in patients before and after elective coronary artery bypass surgery, 337–349
Herbicides, with different modes of action, circadian response of annual weeds to application rates of, 299–324
Human cancer cell lines, oscillation of human period 1 (*hPER1*) reporter gene activity in, 671–681
Human period 1 (*hPER1*) reporter gene, oscillation of activity in human neuroblastoma cells, 671–681
Hyperprolactinemia, chronic, effect on daily changes in GABA and taurine concentration in various hypothalamic areas, 271–284
Hypersomnia, recurrent, differences in clock gene in a patient with, 893–900
Hypothalamus, effect of chronic hyperprolactinemia on daily changes in GABA and taurine concentration in various areas of, 271–284

Hypothalmic circadian organization, in birds
anatomy, functional morphology, and terminology of the suprachiasmatic region, 637–655
clock gene expression, 657–669

I

Indomethacin, kaolin-induced pain model for evaluation of chronopharmacodynamics in mice, 473–484
Intestinal epithelium, sex- and age-related temporal variations in proliferation of, 37–47

J

Jet lag assessments, relationship with its symptoms, 1061–1073

K

Kaolin-induced pain model, for evaluation of chronopharmacodynamics of indomethacin in mice, 473–484

L

Lifestyle regularity, relationship with subjective sleep quality, 97–107
Light treatment, for seasonal affective disorder, 189–207
Light
bright, vigilance levels during and after exposure in the first half of the night, 1019–1038
constant, entrainment of eclosion rhythm in *Drosophila melanogaster* populations reared for more than 700 generations in, 977–987
effect on the circadian system controlling sperm release in moth *Spodoptera littoralis*, 809–821
effect during lactation on the phasic and tonic responses of the rat pacemaker, 21–35
effect on the motor activity circadian rhythm of blinded rats during lactation, 441–450
entrainment of circadian activity rhythms in tench (*Tinca tinca*) to, 1001–1017
intensity
dependence of plasticity of hamster circadian entrainment patterns on, 233–248
effect on dietary carbohydrate absorption, 123–133
effect on the digestion of carbohydrate in the supper meal, 853–862
effect on the phase and period response curves in the nocturnal field mouse *Mus booduga*, 223–231
masking response impairment in melanopsin-knockout mice, 989–999
Light–dark zeitgeber, change of relative strength in old mice, 405–416
Longitudinal rhythmometric models, with multiple components, methods for comparison of parameters from, 495–513

M

Mammals, electrophysiology of the circadian pacemaker in, 171–188
Masking, impairment in responses to light in melanopsin-knockout mice, 989–999
Melanopsin-knockout mice, impaired masking responses to light in, 989–999
Melatonin
and the circadian system in rats and mice, 697–710
effects of diazepam and its metabolites on nocturnal secretion in the rat pineal and Harderian glands, 285–297
effects on isolated rat brain mitochondria, 451–461

Melatonin (*continued*)
for resetting the circadian phase positions of blind people, 837–852
Menstrual cycle phase, effects of phase on the kinetics of ranitidine, 485–494
Mice
behaviorally arrhythmic *mPer/mCry* triple mutant, daily variation of clock output gene activation in, 683–695
circadian rhythms of toxic effect of ondansetron in, 1103–1116
dark adaptation of circadian photic responsiveness in, 417–440
effect of light intensity on the phase and period response curves in, 223–231
evaluation of indomethacin chronopharmacodynamics by the kaolin-induced pain model in, 473–484
old, change of relative strength of light–dark zeitgeber in, 405–416
Microalgae, function of circadian RNA-binding proteins and *cis*-acting elements in, 529–541
Moth *Spodoptera littoralis*, effect of light and temperature on the circadian system controlling sperm release in, 809–821
Motor activity circadian rhythm, of blinded rats during lactation, effect of lighting conditions on, 441–450
mRNAs, lifetimes for clock-regulated proteins in a dinoflagellate, 963–976
Multiple components, methods for comparison of parameters from longitudinal rhythmometric models with, 495–513

N

Neural organization, of the circadian system of the cockroach *Leucophaea maderae*, 577–591
Night shiftwork, risk to healthcare workers, 351–360

O

Ondansetron, circadian rhythms of toxic effect in mice, 1103–1116
Oxidative phosphorylation, circadian rhythms of, 451–461
Oxidative stress, and circadian rhythms, 921–962

P

Palmtop computer, for 24-hour assessment of performance, 109–121
Period response curves, effect of light intensity on in mice, 223–231
Period responses, to zeitgeber signals, stabilization of circadian clocks during entrainment by, 389–404
Phase response curves, effect of light intensity on in mice, 223–231
Photic responsiveness, in the mouse, effects of prolonged exposure to darkness on, 417–440
Photoreceptors, extraretinal, putative role as receptors of natural zeitgeber stimuli in arthropods, 593–616
Pineal gland
chick, circadian signaling in, 617–636
effects of diazepam and its metabolites on nocturnal melatonin secretion in, 285–297
Plant pathology, of rice (*Oryza sativa* L.), 81–96
Postprandial metabolism, circadian aspects of, 795–808
Purification methods, development for assessment of body temperature circadian rhythms in Mongolian gerbils, 249–270

R

Ranitidine, effects of gender and phase of the menstrual cycle on the kinetics of, 485–494
Rats
  male Long Evans, hormone rhythms in those in an acute phase of adjuvant arthritis, 823–836
  transgenic TGR(mREN2)27, as a model for disturbed circadian organization at the level of the brain, the heart, and the kidneys, 711–738
Rest–activity cycle, actimetry assessment of changes to, 1039–1059
Rice (*Oryza sativa* L.), chronopathology of disease incidence in, 81–96
RNA-binding proteins, circadian, function and *cis*-acting elements in microalgae, 529–541
Rotenone, effects on isolated rat brain mitochondria, 451–461
Running wheels, effect of cage enrichment on use by Syrian hamsters, 9–20

S

Seasonal affective disorder, overview of, 189–207
Seasonal rhythmicity, of serum cortisol, 65–79
Shift work, differences in eating habits for, 1075–1092
Sleep, relationship of lifestyle regularity with subjective quality of, 97–107
Sleep–wake circadian rhythm, for night shiftwork healthcare workers, 351–360
Sperm release, in moth *Spodoptera littoralis*, effect of light and temperature on the circadian system controlling, 809–821
Stress reactivity, of cortisol, 863–878
Suprachiasmatic nucleus
  anatomy, functional morphology, and terminology of the region of, 637–655
  review of, 1–8
Surface plasmon resonance spectroscopy interaction studies, of the circadian-controlled tomato LHCa4*1 (CAB 11) protein with its promoter, 543–558
Symptoms, power in prediction of jet lag severity, 1061–1073

T

Taurine, effect of chronic hyperprolactinemia on circadian rhythm in concentration changes in various hypothalamic areas, 271–284
Temperature, effect on the circadian system controlling sperm release in moth *Spodoptera littoralis*, 809–821
Temporal pattern, in consumption of the first drink of the day in alcohol-dependent persons, 1093–1101
Tench (*Tinca tinca*), entrainment to light of circadian activity rhythms in, 1001–1017
Tomato LHCa4*1 (CAB 11) protein, circadian controlled, surface plasmon resonance spectroscopy studies of interaction with its promoter, 543–558
Trypanosoma cruzi, circadian system of mice infected with, 49–64

V

Vigilance levels, during and after bright light exposure in the first half of the night, 1019–1038

W

Winter depression, overview of, 189–207

Z

Zeitgeber hierarchy, in humans, 837–852

Zeitgeber stimuli, putative role of extraretinal photoreceptors as receptors in arthropods, 593–616
